

# Hyrule

A card game for 2-7 players.

## requirements

Use a standard card playing deck, keeping Jokers. Shuffle however you like.

## dealing

Each player is dealt 7 cards, kept secret from other players.

## turns

There are two variations for taking turns. “Chance rules” is strictly a matter of chance, and is recommended for impatient players because it tends to be faster-paced and has more of a *surprise!* element. “Strategy rules” introduces an element of strategy and is better suited for players with more *patience*.

## chance rules

Each player selects one card and places it face down in the middle playing area between themselves and other players.

On the count of 3, all said together in rhythm, each player flips over their own card. Precedence applies and the winning player takes all cards.

## strategy rules

On the first turn or when an equal number of cards have been captured by each player, the tallest player goes first. On each subsequent turn, the player with the most captured cards plays first. The play order then proceeds counter-clockwise.

Each player selects a card and places it face-up in the center play area. Precedence rules apply and the winning player takes all cards.

## precedence

The following rules apply across suits with the exception of *jokers and fives* (explained below). Cards within a single suit are compared with higher-value cards winning. Cards are counted from ace (1) through king (13).

Ways to think about these rules could include:

- “rupee buys bomb” / money buys weapon
- “rupee buys sword” / money buys weapon
- “bomb blows up sword” / range weapon beats melee weapon
- “bomb blows up heart” / range weapon beats unarmed
- “sword cuts through heart” / melee weapon beats unarmed

- “heart is stronger than rupee” / love conquers money

**NOTE:** In the case of a turn that involves 3 or more cards, the presence of both diamonds *and* hearts will result in the highest-value heart winning the turn.

### **diamonds (“rupees”)**

Beats:

- clubs (“bombs”)
- spades (“swords”)

### **clubs (“bombs”)**

Beats:

- spades (“swords”)
- hearts

### **spades (“swords”)**

Beats:

- hearts

### **hearts**

Beats:

- diamonds (“rupees”)

### **jokers (“tingles”)**

Beats everything except *fives*

### **fives**

The 5 of a given suit will be granted special status *only* when played against a joker (“tingle”) and will win with the following sub-precedence, which is roughly the inverse of the main precedence:

- 5 of hearts
- 5 of spades / “master sword”
- 5 of clubs / “bomb cluster”
- 5 of diamonds / “blue rupee”

### **scoring**

At the conclusion of a round of 7 cards, the player with the most cards is the winner. The face values of the cards is not considered at scoring time. A draw may be handled in a “run-off game” or ignored as you like.

## examples

In the following examples, the **winning card** is highlighted at the top of each list, followed by an explanation for the outcome.

### 2-player

- **2 of clubs**
- 2 of spades

Clubs are higher-value than spades, or “bomb beats sword”.

- 
- **2 of clubs**
  - ace of clubs

Cards within the same suit are compared at face value with aces being 1.

- 
- **ace of hearts**
  - king of diamonds

Hearts take precedence over diamonds, or “love is stronger than money”.

- 
- **joker**
  - king of hearts

The opposing card is not a *five*, or “tingle takes (*thing*)”.

- 
- **5 of spades**
  - joker

The 5 of any suit will beat a joker given its special item status in that scenario, or “tingle is distracted by the beauty of (*thing*)”.

### 3-player

- **2 of diamonds**
- 2 of clubs
- 2 of spades

Diamonds have higher precedence than clubs and spades, and there are no hearts present.

- 
- **6 of clubs**
  - 6 of spades
  - 6 of hearts

Clubs have higher precedence than spades and hearts, and there are no diamonds present.

- 
- **8 of hearts**
  - 8 of diamonds
  - 8 of spades

When both diamonds and hearts are present, hearts is highest precedence.

- 
- **king of diamonds**
  - jack of diamonds
  - queen of diamonds

Within the same suit, cards are compared by face value.
